The U.S. forklift division located in Cleveland has a skilled team knowledgeable in Product Sales, Purchasing, Marketing, Logistical and Technical Support.

Start-up of the forklift industry

Korea's initial home-based forklift market was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. started to import assembled forklifts as part of a national machinery expansion venture. Early sales of this industrialized equipment focused on large business groups, the armed forces and on state-run companies. This ultimately led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced trade operations throughout Korea to service and sell this heavy equipment. By 1978, a forklift manufacturing plant was successfully completed. Continuous technical instruction became the new focus for improving quality and product development.

Growth of Forklift Exports

Daewoo started the first home-based lift truck business in 1967, and rapidly gained a massive 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's advanced technological improvements combined with sales success placed them in a situation of significant growth of their forklift business.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a cooperative venture project to counter act competitive pressures in the US materials handling industry. This venture greatly expanded Daewoo's lift truck sales. Construction was completed in 1984 to facilitate a contemporary plant which helped establish the business for the manufacture of high added-value goods suited for export. In 1993, the company had a international sales system and started exporting versions they had developed through in-house technology, as an independent brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion possibilities into international marketplaces.
