

Boom Lift Training Mississauga

Boom Lift Training Mississauga - Elevated work platforms, also known as aerial platforms, enable workers to carry out jobs at heights which would otherwise be inaccessible. There are various styles of lifts designed for various site applications and conditions. If carelessly operated, elevated work platforms could result in serious injury or death. The most common causes of related accidents are electrocution, falls, tip-overs and crushed body parts. Lift operators should be trained fully in techniques to prevent accidents while operating lifts.

The Aerial Lift Safety program offers required resources in order to help individuals required to learn how to operate these devices more effectively. Through the course, participants will be given thorough instruction. Kinds of lift covered comprise boom supported, scissor and articulating aerial lifts. The video presents the proper techniques operators should follow. Instruction focuses on protection against falls, pre-operational check, safe driving procedure and stability of the device.

The boom lift training course would help to address equipment reliability and employee safety, utilizing materials that are completely compliant with your regional and local regulations and requirements. Training methods and course management would be taught. The trainer will also become well versed in the technical aspects of aerial lift safety.

Both classroom training and practical training are parts of the Aerial Platform/Boom Truck Training program. Both sessions should be completed successfully for the participant to receive a certificate of achievement.

The self-propelled boom-supported elevating work platforms are different from the self-propelled elevating work platforms in that they are able to position their work platforms entirely beyond the base of the machinery. The theoretical component of the training is virtually the same for both kinds. The practical training part could be completed more quickly if just one kind of equipment is used.

Elevating Work Platform Training Program Objectives:

Aerial Platform/Boom Lift Training provides competency requirements for safe operation of Boom-Type Elevating Work Platforms and Self-Propelled Elevating Work Platforms (for use on paved/slab surfaces). Training would help operators to efficiently use elevating work platforms whilst decreasing the chances of a costly accident in the workplace. Trainees will review of business policies and applicable rules, talk about Due Diligence, study Criminal Negligence and consequences to trainers, employers, workers and supervisors. Participants will study equipment features, stability, operating procedures, charging/fueling procedures and parking. Site-specific safety matters will be dealt with.
